By decreasing nutrient loading, the County can decrease the potential of algal blooms and eutrophication which directly affect the health of an ecosystem.	Utilizing FDEP Guidelines for Nitrogen Reduction the County will be able to measure the level of benefit by monitoring the discharge monitoring reports (DMRs) for effluent nutrient concentration of the receiving centralized wastewater treatment facility (WWTF). Measure through the reduction by comparing the DMRs of the previous decentralized WW systems to the receiving WWTF DMRs as well as comparing the receiving WWTF DMRs to the known nutrient loading resulting from OSTDSs.
